Summary

Results-oriented Analyst transitioning from a leadership role in retail operations. Skilled in translating raw data into actionable business strategies using SQL, Python, and interactive Dashboards. Combines technical expertise with 3+ years of supervisory experience to drive process improvements and data-backed decision-making.

EDUCATION

W. P. Carey School of Business, Arizona State University, Tempe, AZ

Dec 2025

Bachelor of Arts, Information Security

- **GPA:** 3.68
- **Coursework:** Data Wrangling with SQL, Data Analysis with Python, Programming Analytics, Business Database Concepts, Math for Business Analysis

WORK EXPERIENCE

Starbucks

Oct 2021 - Present

Shift Supervisor

Brandon FL

- Supervised employees, achieving a 23% improvement in speed of service by optimizing workflows and leveraging available technology.
- Analyzed historical sales data to optimize inventory thresholds, reducing order processing time by 50% and minimizing food waste by 10%.
- Audited team performance and provided regular feedback to improve individual and team outcomes resulting in a 10% increase in customer satisfaction scores.
- Troubleshoot and resolved over 300 tickets with point-of-sale systems, facility issues, and store equipment, ensuring minimal disruption to operations.
- Recognized for excellent team performance and leadership, receiving "Partner of the Quarter" three times.

Global Tech Academy

Jan 2024 - Apr 2024

Coding For Data Trainee

Remote

- Used Python (Pandas) to merge and aggregate webanalytics CSV files into a structured dataset, which validated the strategic domain split and guided the decision to implement the new architecture.
- Developed interactive Plotly visualizations to track user engagement, identifying a 42x surge in traffic (1.3M+ visitors) during award ceremonies compared to daily averages.
- Conducted exploratory data analysis (EDA) in Jupyter Notebooks, validating a website separation strategy by revealing a decrease in bounce rate from 41.6% to 33.6%.
- Collaborated with stakeholders to assess digital strategy effectiveness, presenting data-driven evidence that the new domain architecture improved user retention by ~20% (8-point drop in bounce rate).

PROJECTS

Retail Performance & Demographics Dashboard | https://github.com/zjrball/Retail_Shop_Case_Study

Nov 2025

- Designed a relational database schema in MySQL to consolidate 2 years of disparate sales, weather, and demographic datasets for 4 retail locations.
- Executed complex SQL queries using JOINS, Views, and CASE statements to transform raw data into a structured format for analysis.
- Developed an interactive Power BI dashboard to visualize KPIs, revealing a 50% decrease in foot traffic during precipitation events and a clear weekend shift toward family demographics.
- Translated data insights into strategic recommendations for dynamic staffing and targeted marketing, potentially optimizing operational costs during low-volume periods.

Coffee Sales Analysis | https://github.com/zjrball/coffee_sales

Nov 2025

- Conducted time-series analysis on 3 years of retail data, identifying a +13.6% increase in YoY sales rebound driven by successful product size strategies, after an initial -0.57% slump.
- Identified a significant customer retention gap (46% loyalty participation) and developed three actionable recommendations to capture 53% of non-loyalty sales by optimizing marketing spend and product expansion.
- Engineered an interactive Excel dashboard, cleaning and transforming raw data using Pivot Tables, Slicers, INDEX/MATCH, and nested IF functions to standardize product naming and enable dynamic filtering.

Intel Data Analysis for Sustainability | https://github.com/zjrball/Intel_Sustainability_Analysis

Apr 2024

Coding For Data Trainee, Intel Data Analysis for Sustainability, Global Tech Academy

Global Tech Academy

- Engineered SQL queries using Joins, Unions, and CTEs to aggregate data from 2,500+ power plants, cleaning and preparing datasets for analysis
- Designed interactive Tableau dashboards to visualize energy trends, identifying a 22 million MW surplus in the Pacific Northwest.
- Presented a strategic recommendation to reduce carbon footprint, pinpointing a location with 52% renewable energy generation.

SKILLS

- **Languages and Software Proficiency:** Python, SQL, Tableau, Excel, Microsoft Office Suite, R Programming, PowerBI, Pandas, NumPy
- **Technical Skills:** Exploratory Data Analysis, Data Visualization, Relational Databases, XLOOKUP, INDEX & MATCHING
